SUMMARY

Solution Architect and DevOps engineer with 10+ years building and migrating cloud infrastructure. Deep hands-on experience in AWS, Azure, Kubernetes, and Terraform. Delivered production systems for fintech, genomics, and media companies — from 30PB data pipelines to zero-downtime migrations. Now focused on enterprise AI infrastructure and cloud-native architectures.

AI/LLM Infrastructure — Designed and deployed enterprise Anthropic Claude integrations: secure API gateways, IAM roles, audit logging, and usage controls for production LLM workloads.

 **30 PB+**
cross-region data migrated, zero loss

 **~2m40s RTO**
disaster-recovery design, near-zero RPO

 **~6x throughput**
pipeline re-architected for horizontal scale

SKILLS

Cloud:	AWS (12+ yrs), Azure (5+ yrs), GCP (2+ yrs)	IaC & Automation:	Terraform, Pulumi, Ansible, Helm, Packer
Kubernetes:	AKS, EKS, GKE, on-premises (3+ yrs)	CI/CD:	GitLab CI, Azure DevOps, Jenkins, GitHub Actions
Databases:	PostgreSQL (6+ yrs), MongoDB, Redis, MySQL	Observability:	Datadog, Prometheus, Grafana, InfluxDB
Messaging:	Kafka, RabbitMQ, NATS	On-prem / Virt:	Proxmox, VMware, LXC/LXD, Linux
Languages:	Bash, Python		

EXPERIENCE

Solution Architect — 2bcloud Aug 2024 – Present

Cloud migrations, enterprise AI infrastructure, Azure/AWS

- ▶ Migrated high-load production services from AWS to Azure, rebuilding architectures around containerized, cloud-native workloads
- ▶ Diagnosed and remediated a major cloud cost incident, tracing runaway spend to orphaned search indexers and zombie containers
- ▶ Architected a disaster-recovery solution for a mission-critical system, achieving ~2m40s RTO and near-zero RPO
- ▶ Re-architected a media processing pipeline for horizontal batch scaling, delivering a ~6x throughput improvement

Senior DevOps Engineer — FILO Systems Aug 2023 – Aug 2024

CI/CD, benchmarking, multi-cloud observability

- ▶ Redesigned GitLab CI/CD pipelines for cross-platform binary builds, cutting build-test cycle times significantly
- ▶ Built benchmarking and observability stack (InfluxDB, Grafana) spanning AWS, GCP, and on-prem bare metal
- ▶ Streamlined R&D data collection workflows, enabling faster performance testing and iteration

Senior DevOps Engineer — C2i Genomics Feb 2022 – Jul 2023

Multi-account AWS, data pipelines, security hardening

- ▶ Refactored Azure DevOps pipelines, reducing build and deployment times across the engineering organization
- ▶ Managed ~30PB of cross-region AWS S3 data transfers; designed IAM access control across 30+ AWS accounts
- ▶ Hardened multi-account cloud security posture — governance policies, least-privilege access, audit trails

System Engineer L3 — EPAM Systems Mar 2019 – Feb 2022

Multi-client: DealHub, Refinitiv, AOS, Esports — AKS, monitoring, CI/CD

- ▶ Overhauled monitoring stack (CloudWatch, Splunk, Datadog), reducing noise and improving incident response time
- ▶ Built production-ready AKS clusters — networking, security policies, and autoscaling from day one
- ▶ Led AWS-to-VCloud migration for production fintech workloads with no unplanned downtime and full regulatory compliance

Head of DevOps — WalletFactory Mar 2018 – Jul 2019

Fintech infrastructure from scratch, 5 countries, team leadership

- ▶ Architected fintech infrastructure from scratch using Terraform and Ansible — QR payments, e-money, P2P transactions across 5 countries
- ▶ Deployed full TICK-stack monitoring (Telegraf, InfluxDB, Chronograf, Kapacitor) for real-time production analytics
- ▶ Built and led a 24/7 on-call operations team; reduced production incident response time and deployment downtime

EDUCATION & CERTIFICATIONS

Master's Degree, Computer Science
2020

AWS Solutions Architect Associate
2020
